

Good for Enterprise™: Android®

Support and Manage New Android Devices While Keeping Company Data Safe

Good for Enterprise helps IT administrators secure a wide range of Android smartphones.

The ease of use, productivity, and variety of smartphones running on the Android platform offer buyers unprecedented device choice. Good for Enterprise brings IT departments an efficient and cost-effective way to allow employees to use the Android devices they prefer while ensuring enterprise-class security and compliance for access to company information and applications.

SECURITY FIRST

Good starts with patented end-to-end security that contains corporate data along every phase of its delivery to Android—and other—devices. Over-the-air transmissions and enterprise data at rest are all secured with industry-leading AES-192 encryption.

All Good servers are deployed behind the firewall with a secure outbound connection using standard port 443, so Good never requires inbound connections or firewall configuration changes.

CONTAINING CORPORATE DATA

Good for Enterprise provides a secure, “contained” environment by encrypting data from the corporate server and isolating it at all times within a separate Android application. The Good app runs on a wide

range of Android phones and tablets, including the Motorola DROID X and DROID 2; the HTC EVO and Incredible; the Samsung Fascinate, Captivate and Epic 4G; and the Dell Streak.

LOCKED INSIDE ANDROID

All corporate data stays within the Good for Enterprise app. Android users access their email, contacts, and calendar as if they were using their Outlook or Notes client at a desktop PC. Outside the app, business and personal data don't mix.

VISIBILITY AND CONTROL

Helpdesk personnel can quickly troubleshoot issues with complete visibility of all Android devices deployed within the company, enforcing application password policies—even performing a remote wipe of enterprise data in the event a phone is lost or stolen. Self-service capabilities allow IT to enable users to perform basic tasks like adding a device or remote wiping their own device.

WEB-BASED MANAGEMENT

IT administrators can use any web browser to access a single dashboard view to handle device management and security. They can provision new Android devices, enforce passwords, establish role-based policies from virtually anywhere, anytime. IT spends less time managing software and more time monitoring and protecting business data.

“Good brings management capabilities to the Android which previously kept these devices out of the enterprise. It's the missing layer that makes these devices a viable alternative.”

Nelson Saenz, Director of IT
Active Interest Media

A separate password into the application provides an additional layer of security.

Android users sync with office email to send, receive, delete, forward, or search messages in real time. Push notifications indicate when new email arrives.

Secure synchronization of calendar and contacts allows users to accept, decline, or schedule meetings from their Android devices.

FEATURES	BENEFITS
Web-based management console with Good Mobile Control	Manage and troubleshoot Android devices as well as other platforms from anywhere, anytime
Over-the-air management and administration	Provides easy and scalable deployment to end users
Role-based administration	Delegate rights and permissions for different roles (managers, staff, administrators) so employees can perform tasks related to their jobs
Policy-based management	Customize policies for different user groups and assign to one or multiple users at once
AES-192 end-to-end encryption	Ensure enterprise class data protection
Remote wipe	Delete the Good application and encrypted corporate data if phone is lost or stolen
Email, calendar and contacts provided through a single, easy-to-use application	Speed adoption and maximize productivity
Complete calendaring and scheduling	Schedule and manage meetings from your phone while on the go
