

Good for Enterprise™: iOS

Support and Manage the Most Popular Devices—
iPhone, iPod touch, and iPad

Good for Enterprise helps IT administrators safely deploy and manage corporate access to Apple's entire line of mobile devices.

As iPhone and iPad owners explore new ways to do their jobs on their favorite Apple® devices, Good for Enterprise brings IT departments an efficient and cost-effective way to allow employees' tremendous freedom of choice as they ensure enterprise-class security and compliance.

SECURITY FIRST

Good starts with patented end-to-end security that contains corporate data along every phase of its delivery to any iOS device. Over-the-air transmissions and enterprise data at rest are all secured with industry-leading AES-192 encryption.

All Good servers are deployed behind the firewall with a secure outbound connection using standard port 443, so Good never requires inbound connections or firewall configuration changes.

CONTAINING CORPORATE DATA

Good for Enterprise provides a secure, "contained" environment by encrypting data from the corporate

server and restricting its access within a special iOS application. The app runs on all iOS devices including iPhones, the iPod Touch, and iPad.

All corporate data stays within the Good for Enterprise app. iOS mobile device owners can get their email, contacts, and calendar as if they were using their Outlook or Notes client at a desktop PC. Outside the app, business and personal data don't mix.

VISIBILITY AND CONTROL

Helpdesk personnel can quickly troubleshoot issues with complete visibility of all iPhones and iPads deployed within the company, enforcing application password policies—even performing a remote wipe of enterprise data in the event a device is lost or stolen. Self-service capabilities allow IT to empower users with basic tasks like adding devices or remote wiping their own devices.

WEB-BASED MONITORING

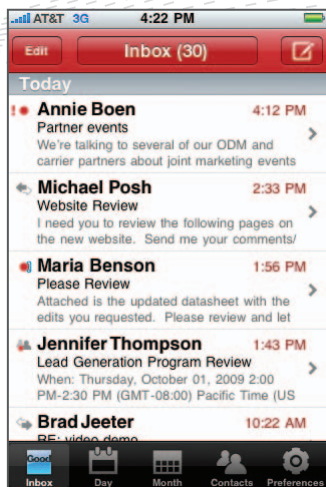

IT administrators can use any web browser to access a single dashboard view to handle device management and security. They can provision new iPhone OS devices, enforce passwords, establish role-based policies from virtually anywhere, anytime. IT spends less time managing software and more time monitoring and protecting business data.

“The Good Technology solution lets you protect corporate data without policing personal use of iPhones and other iOS devices.”

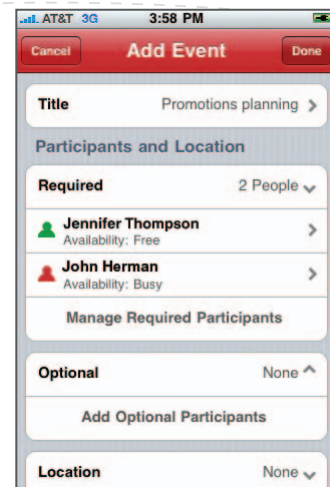

Brad Reiter, Director of Product Management
Good Technology

An application password provides an additional layer of security.

iPhone users can sync with office email to send, receive, delete, forward or search messages in real-time. Push notifications indicate when new email arrives.

Secure synchronization of calendar and contacts allows users to accept, decline, or schedule meetings from their iPhone

FEATURES	BENEFITS
Web-based management console with Good Mobile Control	Manage iOS devices as well as other platforms from anywhere, anytime
Over-the-air management and administration	Provides easy and scalable deployment to end users
Role-based administration	Delegate rights and permissions for different roles (managers, staff, administrators) so employees can perform tasks related to their jobs
Policy-based management	Customize policies for different user groups and assign to one or multiple users at once
End-to-end encryption	Ensure enterprise class data protection
Remote wipe	Delete the Good application and encrypted data if phone is lost or stolen—or wipe the entire device in situations that require it
Email, calendar, and contacts provided through a single, easy-to-use application	Speed adoption and maximize productivity
Complete calendaring and scheduling	Schedule and manage meetings from your phone while on the go
