

Better Management with Kaspersky Administration Kit 8.0

Get a single view of your business-wide security situation with a simple and intuitive interface for managing security across the corporate network down to an individual device with Kaspersky Administration Kit 8.0. Set and enforce security policies on the devices employees use wherever they go. And get real-time security information delivered the way you want it.

Easy Installation & Deployment

- One-step installation of all components
- Easy upgrade from previous versions
- Automatic generation of installation packages
- Automatic generation of policies and tasks
- Automatic and configurable network discovery
- Simplified "Rip & Replace" with automatic removal of incompatible applications
- Integration with Active Directory
- A single, configurable reboot required
- Improved remote installation

Simplified Management

- Scenario-based administration provides a set of pre-loaded, "canned" tasks, that are wizard driven and help identify, create and manage a number of standard workflows
- Improved interface – easy for beginners and powerful for experts
- Less clicks to complete a task
- Cisco NAC/MS NAP support
- Mobile user policy support
- Wake-on-LAN support
- Bandwidth throttling

Powerful Reporting

- Dashboards for real-time status information
- Expanded reporting formats (PDF, XML, SQL Views)
- SNMP Support for integration with security consoles
- Systems Admin auditing
